Overview

Description

Evaluation

Submission Instructions

The aim of the contest is to determine how people may be identified based on their eye movement characteristic. The organizers provide all interested participants dataset of eye movements' recordings in CSV format. After downloading the training dataset, participants may analyze it to prepare their own classification models and try to classify samples in test dataset.

This is an official competition for [BTAS 2012 \(The Fifth IEEE International Conference on Biometrics: Theory, Applications and Systems, September 23-27, Washington DC, USA\)](#) and all results will be published during that conference (and of course on this web page as well).

To become a participant you don't need to have any special eye tracking equipment. All data needed is ready to download! You only need to have some experience in data classification and... take your chance.
