Visualization Track now open >>

Do you think you can take on the crudest, meanest trolls on the internet? Okay then, game on!

The challenge is to detect when a comment from a conversation would be considered insulting to another participant in the conversation. Samples could be drawn from conversation streams like news commenting sites, magazine comments, message boards, blogs, text messages, etc.
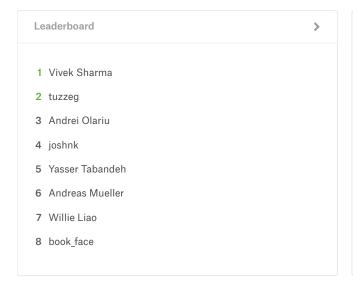

The idea is to create a generalizable single-class classifier which could operate in a near real-time mode, scrubbing the filth of the internet away in one pass.
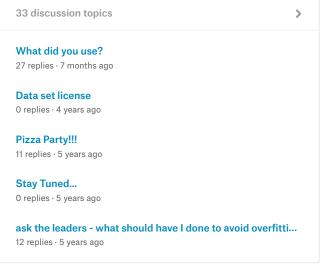

Prizes you say?

Besides the prize money, eternal fame and glory, monuments in your honor, and the admiration of friend and foe alike, you get a chance for an interview at Impermium for the Principal Data Engineer role.

In addition, there will be a Visualization prospect attached to the contest. Slice and dice the data to show us the most amazing, informative and thought-provoking infographics, diagrams or plots! Submission open 1 week before the contest ends.

(Please note that referenced fame, glory, monuments and admiration are to be bestowed only in the imagination of the contestants)
